

How Ovulona™ can help the physicians:

It anticipates failure to ovulate in current cycle of a healthy woman¹

Abnormal cycle (red curve) of a healthy young woman whose BBT record is symptomatic of Luteal Phase Defect (LPD); Ovulona™ anticipated the LPD by the absence of the two peaks in the follicular phase – warning that this cycle is infertile.

¹Comparative data from 2 subjects of a baseline pilot study at University of Turin: Subject N, 26 years old and subject A, 25 years old. Both non-smokers, no contraception, no medication.
